Contenido

1. Api para Casos
1.1.   Obtener un caso

Url:	http://<www.apiserver.com>/api/subjects/201
Method:	GET
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Response:	<pre>{
	    "header": [
	        {
	            "status": "success",
	            "message": ""
	        }
	    ],
	    "data": [
	        {
	            "_status": "success",
	            "_message": "read",
	            "subject_id": 201,
	            "category_id": 1,
	            "status_id": 1,
	            "access_type_id": 1,
	            "name": "CORREGIMIENTO DE SACRAMENTO",
	            "summary": "\"A comienzos de la década de 1960 …",
	            "notes": null
	        }
	    ]
	}</pre>

1.2.   Obtener un nuevo caso

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>
Body (form-data):	{"_perform" : "new"}

Response:	<pre>{
	    "header": [
	        {
	            "status": "success",
	            "message": "success"
	        }
	    ],
	    "data": [
	        {
	            "_perform": "new",
	            "_user": "1",
	            "_args": null,
	            "_keywords": "",
	            "_page": 1,
	            "_page_size": 10,
	            "subject_id": 629,
	            "category_id": 1,
	            "status_id": 1,
	            "access_type_id": 1,
	            "name": null,
	            "summary": null,
	            "notes": null
	        }
	    ]
	}</pre>

1.3. Crear un caso

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access token: <access token>

Body (form-data):	```
	{
	  "_perform": "create",
	  "subject_id": 630,
	  "name": "Nuevo caso",
	  "summary": "Descripción del Nuevo caso",
	  "access_type_id": 2,
	  "category_id": 4,
	  "status_id": 1
	}
	``

Response:	```
	{
	    "header": [
	        {
	            "status": "success",
	            "message": ""
	        }
	    ],
	    "data": [
	        {
	            "_status": "success",
	            "_message": "read",
	            "subject_id": 630,
	            "category_id": 4,
	            "status_id": 1,
	            "access_type_id": 2,
	            "name": "Nuevo caso",
	            "summary": "Descripción del Nuevo caso",
	            "notes": null
	        }
	    ]
	}
	``

1.4. Actualizar un caso

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body (form-data):	```
	{
	  "_perform": "create",
	  "subject_id": 630,
	  "name": "Nuevo caso modificado",
	  "summary": "Descripción del Nuevo caso modificado",
	  "access_type_id": 3,
	  "category_id": 2,
	  "status_id": 1
	}
	``

Response:	```
	{
	    "header": [
	        {
	            "status": "success",
	            "message": ""
	        }
	    ],
	``

```
            "data": [
                {
                    "_status": "success",
                    "_message": "read",
                    "subject_id": 630,
                    "category_id": 2,
                    "status_id": 1,
                    "access_type_id": 3,
                    "name": " Nuevo caso modificado",
                    "summary": "Descripción del Nuevo caso modificado",
                    "notes": null
                }
            ]
        }
```

1.5.   Buscar un caso

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access token: <access token>

Body
(form-data):
	{
	 "_perform": "search",
	 "_keywords": "comunidad"
	}

Response:	<pre>{
	    "header": [
	        {
	            "status": "success",
	            "message": "success"
	        }
	    ],
	    "data": [
	        {
	            "_index": 1,
	            "_status": "success",
	            "_message": "search",
	            "subject_id": 8,
	            "category_id": 6,
	            "status_id": 1,
	            "access_type_id": 1,
	            "name": "COMUNIDAD KANALITOJO (PUEBLOS SIKUANI, AMORUA Y
	SALIVA)",
	            "summary": "\"La comunidad indígena (Kanalitojo) ....",
	            "notes": null,
	            "category": "COMUNIDAD INDÍGENA",
	            "access_type": "Oferta",
	            "status": "Activo"
	        },
	
	        ...
	
	        {
	            "_index": 10,
	            "_status": "success",
	            "_message": "search",
	            "subject_id": 28,
	            "category_id": 6,
	            "status_id": 1,
	            "access_type_id": 1,
	            "name": "RESGUARDO INDIGENA COMUNIDAD RIO PURRICHA",
	            "summary": "\"Resguardo Indígena, Embera Dobida, conformado ...",
	            "notes": null,
	            "category": "COMUNIDAD INDÍGENA",
	            "access_type": "Oferta",
	            "status": "Activo"</pre>

```
        }
    ]
}
```

1.6.   Buscar los casos asignados al usuario actual

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body
(form-data):
	{
	 "_perform": "my.subjects.search",
	 "_keywords": "comunidad"
	}

Response:	{
	    "header": [
	        {
	            "status": "success",
	            "message": "success"
	        }
	    ],
	    "data": [
	        {
	            "_index": 1,
	            "_status": "success",
	            "_message": "search",
	            "subject_id": 8,
	            "category_id": 6,
	            "status_id": 1,
	            "access_type_id": 1,
	            "name": "COMUNIDAD KANALITOJO (PUEBLOS SIKUANI, AMORUA Y
	SALIVA)",
	            "summary": "\"La comunidad indígena (Kanalitojo) ....",
	            "notes": null,
	            "category": "COMUNIDAD INDÍGENA",
	            "access_type": "Oferta",
	            "status": "Activo"
	        },
	
	        ...
	
	        {
	            "_index": 10,
	            "_status": "success",
	            "_message": "search",
	            "subject_id": 28,
	            "category_id": 6,
	            "status_id": 1,
	            "access_type_id": 1,
	            "name": "RESGUARDO INDIGENA COMUNIDAD RIO PURRICHA",
	            "summary": "\"Resguardo Indígena, Embera Dobida, conformado ...",
	            "notes": null,
	            "category": "COMUNIDAD INDÍGENA",
	            "access_type": "Oferta",
	            "status": "Activo"
	        }
	    ]
	}

1.7.   Listar tipos de acceso

Url:	http://<www.apiserver.com>/api/subjects/

Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body
(form-data):
	{
	 "_perform": "access_types"
	}

Response:	<pre>{
"header": [
{
"status": "success",
"message": "success"
}
],
"data": [
{
"_status": "success",
"_message": "access_types",
"access_type_id": 2,
"name": "Demanda",
"summary": null
}
…
{
"_status": "success",
"_message": "access_types",
"access_type_id": 4,
"name": "Sin Acceso",
"summary": null
}
]
}</pre>

1.8.   Listar categorías

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body
(form-data):
	{
	 "_perform": "categories"
	}

Response:	<pre>{
    "header": [
        {
            "status": "success",
            "message": "success"
        }
    ],
    "data": [
        {
            "_status": "success",
            "_message": "categories",
            "category_id": 7,
            "name": "COMUNIDAD AFROCOLOMBIANA",
            "summary": "(Decreto 4635 de 2011)",
            "isethnic": true
        },

        …

        {
            "_status": "success",
            "_message": "categories",
            "category_id": 5,</pre> |

```
                            "name": "PUEBLO RROM O GITANO",
                            "summary": "(Decreto 4634 de 2011)",
                            "isethnic": true
                        }
                    ]
                }
```

1.9.   Listar estados

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access token: <access token>

Body (form-data):	{
	 "_perform": "status"
	}

Response:	```{
"header": [
{
"status": "success",
"message": "success"
}
],
"data": [
{
"_status": "success",
"_message": "status",
"status_id": 1,
"name": "Activo",
"summary": null
},
…
{
"_status": "success",
"_message": "status",
"status_id": 3,
"name": "Unificado",
"summary": null
}
]
}```

1.10.   Listar miembros del equipo de trabajo

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body (form-data):	{
	 "_perform": "team.members",
	"subject_id": "1"
	
	}

Response:	```{
"header": [
{
"status": "success",
"message": "success"
}
],```

```
        "data": [
            {
                "_status": "success",
                "_message": "team.members",
                "user_id": 2,
                "name": "ivonne",
                "role": "Profesional del Caso"
            },
            {
                "_status": "success",
                "_message": "team.members",
                "user_id": 1,
                "name": "sa",
                "role": "Administrador"
            }
        ]
    }
```

1.11. Crear un miembro del equipo de trabajo

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body (form-data):	{
	 "_perform": "team.members.create",
	"subject_id": "28"
	"user_id": "2"
	
	}

Response:	{
	    "header": [
	        {
	            "status": "success",
	            "message": "success"
	        }
	    ],
	    "data": [
	        {
	            "_status": "success",
	            "_message": "read",
	            "subject_id": 28,
	            "user_id": 2
	        }
	    ]
	}

1.12. Eliminar un miembro del equipo de trabajo

Url:	http://<www.apiserver.com>/api/subjects/
Method:	POST
Headers:	client_id: <client_id> username: <username> access_token: <access_token>

Body (form-data):	{
	 "_perform": "team.members.delete",
	"subject_id": "28"
	"user_id": "2"
	
	}

9

| Response: | ```json
{
    "header": [
        {
            "status": "success",
            "message": "success"
        }
    ],
    "data": [
        {}
    ]
}
``` |
